DETAILED ACTION

Receipt of Pre-Amendment

1. Receipt is acknowledged of the pre-amendment A filed in the application as paper no. 5.

Information Disclosure Statement

2. The information disclosure statement filed 13 April 2001 fails to comply with the provisions of 37 CFR 1.97, 1.98 and MPEP § 609 because the Other Documents listed fail to provide a month and a year. It has been placed in the application file, but the information referred to therein has not been considered as to the merits. Applicant is advised that the date of any re-submission of any item of information contained in this information disclosure statement or the submission of any missing element(s) will be the date of submission for purposes of determining compliance with the requirements based on the time of filing the statement, including all certification requirements for statements under 37 CFR 1.97(e). See MPEP § 609 ¶ C(1).

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Schneider et al. (US 6,089,976, as cited by applicant) in view of Glasson (US 6,290,600 B1).

Schneider teaches a gaming device 10 comprising controller 60, a plurality of adjacent

video reels 40, and a video monitor 14 for displaying the reels (see figure 1 and col. 4, line 64 – col. 5, line 15). The reels display non-interacting symbols C. A game player uses credit meter 42 to display a credit value on the video monitor. During a bonus game, the monitor may be used as a touch screen (col. 5, lines 56-60) and the player will be visually or audibly prompted to select a symbol on the screen.

Schneider fails to teach or suggest two or more adjacent and non-adjacent symbols on the reels as triggered to interact with one another.

Glasson teaches an electronic game, whereas display 10 shows a plurality of reels 12 containing symbols. During play, when a bonus condition is sensed by a processor, a sequence is triggered in which a symbol 18 may jump across the reels of the display and interact with another symbol adjacent 20 or not adjacent to it 22 (see figures 7-12 and col. 5, lines 36-60). It would have been obvious to one of ordinary skill in the art to include this feature with the game device of Schneider, as it playability, exciting a game player and enhancing his/her interaction with the gaming device. Noises, bright lights, and symbol animation provide extra enjoyment when playing any type of game.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Baerlocher et al. (US 6,319,124 B1) teaches a gaming device with a plurality of reel symbols, the device featuring a display and audio means. Walker et al. (US 6,095,921) teaches a gaming device where reels are displayed on a video screen, the reels containing symbols that can interact with one another.
